NAME

>   *APSRSERVER*
>   − APSR network testing tool designed to collect the traffic from *APRECV* and control the jobs for *APSEND*

SYNOPSIS

>   **apsrserver** [*options*]

DESCRIPTION

>   *APSRSERVER* is a network server which *collect* the traffic from *APRECV* sniffer clients and *control* the *APSEND* packet sender.

OPTIONS

>   **−h | −−help**
>   >   Display a help message and exit.

>   **−p | −−port <port>**
>   >   Specify the port number which the *APSRSERVER* runs on.

>   **−V | −−version**
>   >   Display the *APSRSERVER* version.

SEE ALSO

>   apsend (1), aprecv (1), apsrlib (3), http://www.tcpdump.org or pcap (3) for *BPF* filter logic.
